

The APart SUB2201 subwoofer is designed to reproduce a smooth and punchy bass on a small footprint, offering 250 Watts music power @ 4 Ohm. The 6th order bandpass cabinet produces a dry yet deep bass using only a single 10 inch long stroke woofer.

This subwoofer is the ideal partner for APart MASK speakers in an active setup, with crossover frequencies up to 150 Hz. The black version is equipped with a 35 mm metal pole mount adapter on top, allowing stands for placing top cabinets.

SUB2201 is built in plywood and has a structured paint finishing. The combination of its compact size and powerful bass allow you to put the sub under a bench, in a corner or build it into furniture while still enjoying the vibes of a fat, kicking bass !

TECHNICAL SPECIFICATIONS
