

VAI-80

USB Audio Controller

This little silver tank with analog control provides 4 input/output with RCA and XLR connection, along with headphone output and MIC input. Signals are sent through an analog EQ circuitry, adjusting level, quality and pressure of the sound.

Vestax's own analog technology and experience combines digital data with analog quality, taking away the inorganic feeling when operating with computers.

FEATURES

- > Direct connection from computers to PA systems is enabled with the wide head room of XLR's.
- > Each stereo output channel has its own 2 band equalizer and level control.
MIC input and headphone output also has separate level controls.
- > Easy input/ output monitoring with the LED level meter
