

GENELEC®

Genelec AIC25 Active In-Ceiling Loudspeaker

Genelec **AIC25** Active In-Ceiling loudspeaker system consists of a two-way loudspeaker enclosure and a matched remote amplifier module **RAM2**. Designed to the same rigorous standards as all other Genelec's high performance HT series loudspeakers, the AIC25 features extremely low distortion, neutrality and sound pressure capability unequalled by other in-ceiling loudspeaker of similar size.

The AIC25 loudspeaker has a 5" bass driver and a 3/4" treble driver giving a precise and uncolored acoustic response. The solid, carefully dimensioned enclosure gives far better control of bass reproduction than typical in-ceiling loudspeakers. The enclosure requires only 158 mm (63/16") of free depth inside the ceiling structure and can easily be retrofitted into existing constructions. The visible parts of the loudspeaker can be painted to match the colour of the ceiling.

The RAM2 amplifier module can be rack mounted with its dedicated [RM2 Rack Mount Kit](#) (optional) or placed on a shelf or into a cabinet.

Cut-out diameter	257 mm (10 1/8")
Minimum free mounting depth	160 mm (6 4/16")
